Professional Experience

03/2017 National university student insurance innovation competition
(Sponsored by the insurance institute of China)
Achievements: Won the First Prize in the final competition (2/360).
My Part of This Achievement: Our innovative insurance product included two creative points: the remote sensing data source and a new pricing model based on the remote sensing data. My job was to establish the pricing model which included cluster analysis and linear model to estimate the future loss and insurance price.

01/2015 A Comparative Study on the Insurance Companies Based on PCA
Achievements: I collected the data including 10 features which had some repeat information. After using the PCA to extract the main feature and condense the data more concisely, I got 5 principal components which reflect the market size, loyalty of the customers, profitability, fluidity and capital adequacy of different insurance companies.
