Zifeng Zhang

E-mail: nk12chang@gmail.com
Tel: (+86)13612188261

Education

Nankai University Tianjin China
B.S. in Insurance Specialized in Actuarial Science 09/2012—06/2016
GPA: 88.1/100

Nankai University Tianjin China
M.S. in Applied Statistics 09/2016—06/2018
GPA: 88/100

Standard Test

TOEFL: 102(Reading: 29, Writing: 27, Listening: 24, Speaking: 22) Date: 05/26/2018
GRE: 321 (V154/Q167/AW3.0) Date: 09/28/2018

Professional experience

10/2018 Using Accelerated Life Tests (ALTs) to Simulate and Anticipate the Life-time of Lithium Battery
Instructor: Professor Changliang Zou
We first referred to some related papers about ALTs and analyzed the matching degree of the theories and the factual problems. Now we are extracting the useful methods in the literature and gradually combining the theories with the battery life-time data. This project is still in progress.

Major courses

Postgraduate
Data Mining and Application, Statistical Inference, Modern Statistical Computation, Applied Time Series Analysis, Methods of Data Collection, Applied Multivariate Statistical Analysis, Econometrics, etc.

Undergraduate
Calculus, Linear algebra, Probability Theory, Loss model, Life Insurance Actuarial, etc.

Awards

10/2013 Won “Gong Neng” Scholarship (Top 15%)

09/2016 Won the Postgraduate Scholarship for Outstanding Freshmen, Nankai University

Competitions

10/2018 Rank 590/9840 in the "Titanic: Machine Learning from Disaster" on the website: https://www.kaggle.com/c/titanic
I applied several machine learning tools such as Logistic models, decision tree, random forest, KNN algorithm and Xgboost to predict which passengers survived the tragedy of Titanic with R. I also used R to extract useful information from the given characters such as the kinships and the friendships of the passengers.

03/2017 National University Student Insurance Innovation Competition (Sponsored by the insurance institute of China)
Achievements: Won the **First Prize** in the final competition (**2/360**).
My Part of This Achievement: Our innovative insurance product included two creative points: the remote sensing data source and a new pricing model based on the remote sensing data. My job was to establish the pricing model which included clustering analysis and linear model to estimate the future loss and insurance price.

Professional skills

Proficiency in Language: R
Familiar with: C++
Proficiency in Software: SPSS, Excel
Good Command of: Mathematical Analysis and Deduction of Theorems

Hobbies

Music: Certificate of Erhu Fiddle, Grade Nine.
Soccer: Scored Several Goals in the President's Cup.
Street Dance, Movie.
